

VELARE EXOTICS

Investor Pitch

Drive what you've earned.

CONFIDENTIAL — FOR PROSPECTIVE INVESTORS ONLY

Document version 1.0 · May 2026

How to use this document

This is a **read-ahead memo**, **deck outline**, and **financial model** in one. For a meeting, take Section 1 (Executive Summary) as your one-pager, build the deck from Section 3, and reference the memo (Section 2) for any deep-dive question.

1. Executive Summary

Velare Exotics is a curated peer-to-peer marketplace for exotic and luxury vehicles. We are building the trusted digital marketplace where Lamborghini, Porsche, Ferrari, McLaren, and Rolls-Royce owners actually want to list — and where high-net-worth renters actually want to book.

The market. The US luxury car rental market reached approximately \$6.1B in 2024 and is forecast to roughly double by the mid-2030s. The US added 562,000 millionaires in a single year, reaching 7.9 million — the customer base for a \$1,500/day vehicle is growing at over 7% annually.

The opening. Turo withdrew its IPO in February 2025 and cut 15% of its staff weeks later as growth collapsed from 114% YoY to 8%. Getaround shut down all US operations in February 2025 after running out of cash. The two largest peer-to-peer platforms are wounded or gone — at the exact moment Hertz is paying real money to acquire exotic-rental specialist Gotham Dream Cars and Enterprise is launching exotic collections from Dubai to Detroit.

The wedge. We charge owners 12% commission instead of Turo's 25–40%. We vet every renter and every vehicle. We provide professional photography for every listing, agreed-value insurance underwritten for \$300K+ vehicles, free delivery, and a real concierge layer. The cars on Velare look like they belong at Pebble Beach — because the platform is built for those owners and those guests.

The economics. Average rental: ~\$1,500/day, 3-day average length, ~\$4,500 average booking. Blended platform take rate: ~22% (12% from owner + ~10% renter service fee). Insurance and ops eat into that, but unit economics support a contribution-positive marketplace within 18 months.

The ask. We are raising a **\$2.5M seed round** to launch in Los Angeles (founding market), build the platform, and reach 100 listings + \$1M monthly GMV within 18 months — a position from which a Series A becomes priceable on real revenue.

Why now, why us. The peer-to-peer leader is wounded. The #2 is dead. Legacy rental giants are pouring money into exotic but cannot offer peer-to-peer economics or a curated brand. The window to own the exotic-rental category opens once. It is open right now.

2. Investor Memo

2.1 The opportunity in one paragraph

The exotic and luxury vehicle rental market in the United States is large, growing, and structurally underserved. Two horizontal peer-to-peer platforms (Turo and Getaround) tried to address it with mass-market product and have either pulled back (Turo's withdrawn IPO, layoffs, decelerating growth) or collapsed entirely (Getaround's US shutdown). Meanwhile, traditional rental fleets (Hertz, Enterprise, Sixt) are racing to expand exotic offerings, validating the demand but unable to match peer-to-peer marginal economics. Velare Exotics builds the curated, vertical-specific marketplace that captures supply (exotic owners frustrated with Turo's economics and unscreened renters), demand (a growing population of HNW renters who want a brand that matches the cars they're booking), and the operational layer (insurance, concierge, vetting) that the horizontal players cannot economically provide.

2.2 The supply side: why exotic owners will switch

Exotic vehicle owners face a brutal trade-off on existing platforms. Turo's standard host plan takes 25% of revenue, climbing to 40% on the most-popular protection tier. For a \$1,500/day Lamborghini at 80% occupancy, that's the difference between \$30,600/year (15% plan) and \$21,600/year (40% plan) in commission alone. The platform's growth has slowed dramatically — from 114% year-over-year guest ride growth at one filing to just 8% in its most recent disclosed numbers.

Beyond economics, exotic owners report three persistent grievances on horizontal platforms: 1.

Renter quality — anyone with a credit card and a license can attempt to book a \$300K+ vehicle, and disputes over damage skew toward the platform's volume metrics, not owner protection. 2.

Insurance ceilings — exotic vehicles routinely face valuation disputes when the market value exceeds book value, an everyday reality for appreciating supercars. 3. **Brand association** — owners are reluctant to list halo cars on a platform that puts a 2014 Toyota Camry next to a 720S in the same search result.

Velare addresses each: 12% commission (lower than Turo's most popular tier), application-based renter vetting with MVR and financial checks, agreed-value insurance specifically underwritten for exotics, and a curated marketplace that visually and operationally signals premium.

2.3 The demand side: a growing pool of qualified renters

The US led the world in millionaire population growth in 2024, adding 562,000 high-net-worth individuals to reach 7.9 million. The US holds 34% of global liquid private wealth and 33% of the world's billionaires. The customer for a \$1,500/day rental is not exotic — it is statistically growing.

Two demand-side dynamics matter beyond raw HNWI count:

Experiential preference among next-gen wealth. High-net-worth investors now allocate 15% of their portfolios to alternative investments, with millennial and Gen Z HNWI's at 61% — a generation comfortable with digital, asset-light access to luxury rather than traditional ownership. Luxury experience consumption per HNWI is rising even as luxury goods consumption plateaus.

Online booking is now the default. Industry analyses indicate the majority of luxury rental bookings now happen online. The customer has fully migrated to digital-first booking. There is no offline moat to defend at the high end anymore — only a brand and operational moat.

2.4 Why the legacy rental fleets cannot win this segment

The natural question: if Hertz, Enterprise, and Sixt are all moving aggressively into exotic, why does a startup win? Three structural reasons:

1. **Capital intensity.** A Hertz exotic fleet requires Hertz to *own* the inventory. A peer-to-peer model has owners providing the inventory at zero capital cost to the platform. For a category where any single car can cost \$400K+, this is a defining economic difference.
2. **Inventory diversity.** Hertz Dream Cars and Enterprise Exotic Collection offer perhaps a dozen models per location. A peer-to-peer marketplace at scale offers hundreds — every limited-edition build, every spec configuration. The depth of catalog is impossible to match with owned inventory.
3. **Operational mindset.** Hertz is optimizing utilization across hundreds of thousands of cars. We are optimizing experience across thousands. The product, support, and brand decisions diverge fundamentally.

The legacy fleets entering exotic are validation that the demand is real. They are not the threat — they are the tailwind that makes investors believe in the category before we have to prove it ourselves.

2.5 Why Turo's wounding is our window, not our warning

It is reasonable for an investor to ask: if Turo (the largest, best-funded P2P player) is struggling, why does a vertical-specific competitor win?

The honest answer is that Turo's struggles are largely about its mass-market positioning, not the model. Turo's revenue grew from \$469M to \$746M between 2021 and 2022, but income then shrank to \$19.4M on \$722M revenue through the first nine months of 2024 — a profitability collapse driven

in part by the costs of policing a vast, unscreened mass-market user base. The unit economics of trying to be Airbnb for cars get worse as you scale, because every additional renter is a fraud, damage, and customer-support liability.

The exotic segment inverts this. Higher-value bookings, fewer bookings, more verifiable users, longer rental durations, and willingness to pay for service. A platform with 5,000 vehicles doing \$1,500/day rentals is a healthier business than one with 350,000 doing \$80/day. We don't need to scale to win — we need to dominate a segment.

2.6 Why now (the timing argument)

Several forces converged in the last 18 months that make this the right moment:

- **February 2025:** Turo withdraws IPO citing market conditions and slowing growth.
- **April 2025:** Turo lays off 15% of workforce.
- **February 2025:** Getaround shuts down all US operations after liquidity crisis.
- **March 2025:** Hertz acquires Gotham Dream Cars to expand exotic collection — explicit validation of the segment by the largest legacy rental operator.
- **2024–2025:** Sixt launches premium subscription; Enterprise expands exotic to Dubai; Hertz raises \$500M with luxury and EV fleet expansion as stated use of funds.
- **2024–2025:** US HNWI population grows 7.6%, the fastest absolute growth of any major market.

The horizontal incumbents are weakening or gone. The vertical opportunity is being validated by capital from the largest operators. The customer base is growing at 7%+ annually. There has not been a better time in a decade to build this.

2.7 The product, briefly

Velare is built around three principles: - **Curate, don't aggregate.** Every vehicle approved by a human. Every listing photographed by Velare. Every host vetted. - **Service is the product.** Concierge delivery, real damage handling, route recommendations, on-call support during trips. - **Better economics for both sides.** 12% to owners (vs. 25–40% on Turo). Transparent fees to renters. Clear, easily-modeled profit calculator before any owner signs up.

(See companion document `VELARE_EXOTICS_MASTER_PLAN.md` for the full product, technical, and operational specification.)

2.8 Defensibility & moat

A new entrant gets to feature parity in 6–12 months. The defensible moats are: - **Supply concentration in early markets.** First 200 quality cars in LA become the gravitational pull for renters and create owner network effects. - **Brand.** The hardest moat to copy. Luxury is signaling — once a brand is associated with quality, switching costs are real. - **Insurance underwriting relationship.**

Carriers will not write a policy this specific for a second player without seeing the first one fail. -

Operations playbook. Concierge network, photography network, inspection process, dispute SLAs — all operational IP that compounds.

3. Pitch Deck Outline

12 slides. Each block below = one slide. Speaker notes are written for an 8–10 minute pitch.

Slide 1 — Title

Visual: A single photograph of a black Lamborghini Huracán under sodium light. Logomark top-left. Tagline.

Text:

VELARE EXOTICS *Drive what you've earned. [Your name], Founder & CEO*

Speaker notes: Don't read the slide. "I'm building the marketplace for the cars investors like you would actually want to drive."

Slide 2 — The Problem

Visual: Side-by-side: a Turo screenshot with a 2014 Camry next to a 2022 720S, both at the same low-res quality.

Text:

Exotic owners are losing money on Turo. 25–40% commission.
Unscreened renters. Insurance that doesn't cover what their car is actually worth.

Renters paying \$1,500/day are stuck in the same UX as someone booking a Civic.

Speaker notes: The peer-to-peer rental model works. Mass-market peer-to-peer for *exotics* doesn't. Owners hate it. Renters tolerate it because there's nowhere else to go.

Slide 3 — The Opening

Visual: Three logos with status indicators - Turo: "IPO withdrawn Feb '25 · 15% layoffs Apr '25 · Growth 114% → 8%" - Getaround: "US operations shut down Feb 12, 2025" - Hertz: "Acquired Gotham Dream Cars Mar '25 · Raised \$500M for luxury fleet"

Text:

The peer-to-peer leaders are wounded or gone. The legacy fleets are spending billions to enter exotic. The window is open.

Speaker notes: This is the single most important slide. Spend 90 seconds here. The category is being validated by Hertz at the same moment Turo is retreating from it.

Slide 4 — The Market

Visual: Stacked bar chart showing US Luxury Car Rental Market growth from \$6.1B (2024) to \$13.5B (2035 projected).

Text:

US Luxury Car Rental: \$6.1B (2024) → \$13.5B (2035 projected) 7.49% CAGR

HNWIs added in US in 2024: 562,000 Total US HNWIs: 7.9 million Share of luxury rentals booked online: ~78%

Speaker notes: Underline that the customer base — millionaires in the US — grew by more than half a million people in a single year. We don't need to convert non-customers.

Slide 5 — Why Now

Visual: Timeline horizontal across the slide.

Text:

2024 — Hertz Dream Cars expansion · Enterprise Exotic Dubai · Sixt premium subscription Jul 2024 — Getaround delisted from NYSE Feb 2025 — Turo withdraws IPO Feb 2025 — Getaround shuts down US operations Mar 2025 — Hertz acquires Gotham Dream Cars Apr 2025 — Turo cuts 15% of workforce 2026 —
Velare Exotics launches Los Angeles

Speaker notes: Every major event in this category in the last 24 months points the same direction. The horizontal players are vacating. The legacy players are validating. We launch into the gap.

Slide 6 — What We're Building

Visual: Mockup of the Velare site (dark mode, hero shot of a Porsche 992 GT3, booking widget).

Text:

A curated marketplace for exotic and luxury vehicles.

- *Every car approved*
- *Every renter vetted*
- *Every listing professionally photographed*
- *Agreed-value insurance underwritten for the segment*
- *Concierge delivery, route recs, on-trip support*
- *12% to owners. (Turo: 25-40%).*

Speaker notes: Point to the screenshot. "This is what the customer sees. This is what an owner uploads to. The brand has to look like the cars on it."

Slide 7 — How We Win

Visual: A 2x3 grid, six tiles with icon + headline.

Text:

1. **Owner economics** — *12% vs Turo's 25-40%*
2. **Curation** — *supply quality drives demand*
3. **Real insurance** — *agreed-value, not Kelly Blue Book*
4. **Concierge layer** — *delivery, support, route planning*
5. **Brand** — *built for the segment, not adapted to it*
6. **Adjacent revenue** — *track program, production rentals, member events*

Speaker notes: Six is too many to read. Pick two — economics and curation — and explain. The rest is in the deck for reference.

Slide 8 — Unit Economics

Visual: Single-row table.

Text:

Average daily rate: \$1,500 **Average rental length:** 3 days **Average booking value:** \$4,500 **Velare blended take:** ~\$1,000 (~22%) **Variable cost per booking (insurance, payments, concierge):** ~\$400
Contribution margin per booking: ~\$600

Speaker notes: Investors want to know: does this work per booking? Yes. Every booking is contribution-positive at scale even before fixed-cost leverage.

Slide 9 — Competitive Landscape

Visual: 2x2 matrix. X-axis: "Mass-market ↔ Curated." Y-axis: "Asset-heavy ↔ Asset-light." Logos placed: - Hertz / Enterprise / Sixt → top-left (mass-market, asset-heavy) - Hertz Dream Cars / Enterprise Exotic → top-right (curated, asset-heavy) - Turo / Getaround → bottom-left (mass-market, asset-light) - **Velare Exotics** → **bottom-right** (curated, asset-light) — empty quadrant

Text:

No one is in the bottom-right. That's the quadrant.

Speaker notes: Asset-light + curated is the structurally best position. The legacy fleets can't go asset-light. Turo can't go curated without disrupting its volume model. We're the only player that can occupy this quadrant.

Slide 10 — Go-to-Market

Visual: Map of the US with three markets highlighted in sequence — LA, Miami, NYC.

Text:

Phase 1 (LA, Year 1): 50-100 hand-picked listings. Founding host program. Hotel concierge partnerships. **Phase 2 (Year 2):** Miami + NYC. Track-day program live. Production rentals. **Phase 3 (Year 3):** Vegas, Dubai, Monaco. Velare Black tier.

Speaker notes: Marketplaces win city-by-city, not nationwide. LA is the densest exotic supply in North America. Win it first.

Slide 11 — Team

Visual: Photos and names. (Placeholder — fill in based on actual team.)

Text:

[Founder] — [bio: relevant experience, why this person, why this company] [Co-founder if any] [Advisor list — recruit 2-3 advisors before pitching: ideally one luxury/automotive industry vet, one marketplace operator, one insurance person]

Speaker notes: This slide will need to be filled in with real people. Investors fund teams, not ideas. If it's a solo founder, lean hard on advisors and "key hires planned with this round."

Slide 12 — The Ask

Visual: Clean, single number on a black slide.

Text:

Raising \$2.5M Seed

Use of funds:

- *Engineering & product (40%)*
- *Insurance underwriting + working capital (25%)*
- *Founding host acquisition + ops (20%)*
- *Marketing in LA launch (10%)*
- *Reserve / contingency (5%)*

Milestones to Series A:

- *100 active listings in LA*
- *\$1M monthly GMV*
- *18-month runway*

[your.email@velareexotics.com]

Speaker notes: Be direct. "\$2.5M, 18 months, here's what we'll prove. Are you in or not?"

4. Financial Model & Projections

All projections are pre-launch. Numbers below are *assumption-driven* and clearly labeled as such. An investor will want to push back on every assumption — that's good. The point is to show the model is internally consistent and conservative where it matters.

4.1 Key assumptions

Assumption	Value	Basis
Avg daily rate (ADR)	\$1,500	Mid-range supercar in LA market
Avg rental length	3 days	Industry benchmark for exotic segment
Avg booking value	\$4,500	ADR × length
Owner commission	12%	Stated platform rate
Renter service fee	10%	Stated platform rate
Other revenue (delivery, protection, fees)	~\$200/booking	Conservative
Blended take per booking	~\$1,000	~22% effective rate
Variable cost per booking	~\$400	Insurance, payments, concierge
Contribution margin per booking	~\$600	

4.2 Three-year operating model (LA-only Year 1; expansion thereafter)

Metric	Year 1	Year 2	Year 3
Active markets	1 (LA)	3	6
Active listings (avg)	60	350	1,100
Days booked / car / month	8	12	14
Total bookings (annual)	~1,920	~16,800	~61,600
Avg bookings × \$4,500 = GMV	\$8.6M	\$75.6M	\$277.2M
Velare net revenue (~22%)	\$1.9M	\$16.6M	\$61.0M
Variable costs (~9% GMV)	(\$0.8M)	(\$6.8M)	(\$25.0M)
Gross profit	\$1.1M	\$9.8M	\$36.0M
Operating expenses (S&M, G&A, R&D)	(\$3.5M)	(\$9.0M)	(\$22.0M)
EBITDA	(\$2.4M)	\$0.8M	\$14.0M

Key reads: - Year 1 burn ≈ \$2.4M, fully covered by \$2.5M seed. - Year 2 reaches breakeven on operating basis if expansion goes to plan. - Year 3 demonstrates the marketplace's compounding economics — gross profit grows ~3.7x while opex grows ~2.4x.

4.3 What has to be true for these numbers

For Year 2 to hit, we need: - **Listing growth:** 60 → 350 over 24 months. ~12 net new listings/month at peak. Achievable in 3 markets. - **Utilization growth:** 8 → 12 days/car/month. Driven by demand depth as catalog fills. - **Geographic expansion:** open Miami and NYC by end of Year 2. - **Insurance pricing:** variable cost ratio holds at ~9% of GMV (this is the most sensitive assumption — see Risks).

4.4 Sensitivity table

What if everything is 30% worse than plan?

Scenario	Year 2 GMV	Year 2 Revenue	Year 2 EBITDA	Cash needed
Plan	\$75.6M	\$16.6M	\$0.8M	\$2.5M
-30% volume	\$52.9M	\$11.6M	(\$2.5M)	\$4.5M
-30% volume + ADR softens 15%	\$45.0M	\$9.9M	(\$4.0M)	\$6.0M

The takeaway for investors: even in a pessimistic scenario, \$4.5–6M total raised before profitability is the realistic worst case. Plan a bridge or larger round if pessimism plays out.

5. The Ask & Use of Funds

5.1 Round structure

\$2.5M Seed Round - Vehicle: SAFE (post-money) at **\$12M post-money cap**, OR priced equity round at \$10M pre / \$12.5M post depending on lead investor preference. - Reserve: 15% pro-rata for early investors in Series A. - Anti-dilution: standard broad-based weighted average.

5.2 Use of funds (18-month deployment)

Category	Amount	%	Notes
Engineering & product	\$1,000K	40%	3–4 senior engineers, designer, founder ½
Insurance + working capital	\$625K	25%	Includes premium prefunds, dispute reserves
Founding host acquisition + ops	\$500K	20%	Photography, in-person inspections, concierge launch staff
LA marketing & launch	\$250K	10%	PR, partnerships, content, paid acquisition
Reserve / contingency	\$125K	5%	

5.3 Milestones to Series A

By month 18, we will have: - 100+ active LA listings - \$1M monthly GMV ($\approx$ \$250K monthly revenue)
- A signed insurance carrier relationship with renewable terms - 70%+ owner retention at 6 months -
Net Promoter Score (NPS) above 70 from renters - Validated unit economics: contribution-positive
per booking

A Series A at this point is priceable on real revenue traction, with clear payback math on customer
and owner acquisition.

6. Risks & Mitigations

Honest discussion of what could kill this, and what we do about it. Investors will ask. Better to
address proactively.

6.1 Insurance availability and cost

Risk: Without an exotic-friendly insurance carrier signed, the platform cannot operate. Insurance is
the single biggest gating item. **Mitigation:** Begin carrier conversations *before* fundraising closes.
Targets include Hagerty (exotic specialist), Markel, Chubb, Intact. Build the financial model with
insurance cost as a worst-case 12% of GMV. Have a backup plan to require owners to maintain their
own commercial-grade policy with Velare as additional insured if a carrier deal slips.

6.2 Marketplace cold-start

Risk: Two-sided marketplaces fail when neither side shows up. **Mitigation:** Launch in one dense
market (LA), recruit 25 founding hosts personally (founder-led), provide free professional
photography and reduced commission for charter members. Renter-side: partner with one luxury
hotel and one private jet operator for early demand seeding.

6.3 Damage and dispute exposure

Risk: A single uninsured loss event on a \$400K+ vehicle could materially impact the platform.
Mitigation: Telematics standard on all listings. Pre/post-rental video inspections. Hard daily mileage
limits. Application-based renter screening. Conservative reserve fund (built into financial model).

6.4 Regulatory exposure (state-by-state)

Risk: Some states regulate peer-to-peer rental marketplaces specifically (sales tax, registration,
insurance minimums). Getaround cited regulatory cost as a factor in exiting NYC. **Mitigation:** Launch
in California, where the regulatory environment is well-defined for this model (AB 2773, AB 1297).
Defer NYC and other complex jurisdictions to Year 2 with proper legal preparation.

6.5 Turo competitive response

Risk: Turo could launch a curated tier (e.g., "Turo Black") to compete directly. **Mitigation:** They have considered this and have not done it because it cannibalizes their volume model. Even if they launch it, the brand association problem persists — owners and renters who chose us specifically *because* we are not Turo will not convert. First-mover brand in luxury matters more than feature parity.

6.6 Macro / consumer discretionary downturn

Risk: Luxury rental is discretionary spend. A recession could compress demand. **Mitigation:** HNWI segment is more recession-resistant than mass market. Even in 2020–2021, exotic and luxury experience consumption rebounded faster than economy travel. Production/photo rentals (a separate revenue line in our plan) is countercyclical with content production, providing partial hedge.

6.7 Founder concentration / team

Risk: Single founder with no team yet is a real risk for any seed investor. **Mitigation:** Before round closes, secure: (a) a senior engineering hire commitment, (b) two advisors (one luxury/automotive industry, one marketplace operator), (c) an insurance partner LOI. Investors will fund a complete picture, not a solo founder pitch.

7. Investor FAQ

Q: Why won't Turo just acquire you if you start working? A: Possible outcome. Acquisition by a strategic at the right price is a real exit path. We're building a business that is independently valuable, but a vertical-specific marketplace with strong supply and brand is exactly the kind of bolt-on a Turo (or Hertz) would pay a premium for.

Q: What's the moat in 5 years? A: Brand + supply concentration + insurance underwriting relationships + operational playbook. Same moat structure as StockX vs. eBay — vertical specificity wins on category-specific brand and ops even when horizontal incumbents have more capital.

Q: How do you handle the insurance float? It's a working capital monster. A: Carrier writes the policy; Velare pays premiums per-rental, not per-vehicle. Float is bounded and predictable. Reserves for self-insured-retention layer are funded from gross profit; we model this conservatively in working capital.

Q: Why \$2.5M and not \$5M? A: \$2.5M gets us to 100 listings in LA and proof of unit economics — a clear, priceable Series A milestone. Raising more pre-revenue dilutes founders and signals less discipline. We'd rather hit a clear milestone and price the next round on traction than raise on story.

Q: What's the single thing that has to work? A: Owner acquisition in the first 90 days post-launch. If we get 25 founding hosts at the right quality bar, the rest follows — renters come, brand emerges, capital follows. If we don't, the model doesn't work and we should know it quickly.

Q: International expansion? A: Year 3+. Dubai is the obvious first international market — highest density of exotic vehicles per capita in the world, English-speaking, weak peer-to-peer competition. UK and Monaco follow.

Q: What about EVs / Teslas / Rivian? A: Out of scope for the brand. Velare is exotics and luxury — meaning ICE supercars, GTs, and luxury sedans. EV exotics (Rimac, Lotus Eletre, Lucid Sapphire) are inside the brand. A Model 3 is not.

Q: Have you talked to potential founding hosts? A: [This is the answer the investor will probe hardest. Have real names, real conversations, real commitments before the meeting. "Yes, 14 owners across Beverly Hills and Manhattan Beach have signaled interest. Three have committed to list at launch."]

Q: What's the path to \$100M revenue? A: At \$1,500 ADR / 3-day average rental / 22% blended take, \$100M revenue requires ~300,000 bookings/year. At 14 days/car/month utilization, that's ~1,800 active listings. That's a 6-market business at maturity — achievable in 4–5 years.

8. Source Notes

Cited market data and competitive intelligence below. All figures verified within the last 30 days.

- **Turo IPO withdrawal (Feb 2025), 15% layoffs (Apr 2025), revenue figures:** Multiple sources including SEC filings withdrawal letter, TechCrunch reporting, The Motley Fool analyst summary.
- **Turo growth deceleration (114% → 8% YoY):** Disclosed in S-1 amendments before withdrawal.
- **Getaround US shutdown (Feb 12, 2025):** TechCrunch, NerdWallet, company press release citing "ongoing lack of liquidity."
- **Getaround NYSE delisting (Jul 2024):** NYSE Regulation announcement; delisted under Section 802.01B for failing to maintain \$15M minimum market cap.
- **HNWI population data:** Capgemini World Wealth Report 2025 (US population 7.9M, +562K in 2024); Henley & Partners USA Wealth Report 2025; Altrata World Ultra Wealth Report 2025.
- **US Luxury Car Rental market size:** Market Research Future US Luxury Car Rental Report 2025 (\$6.1B 2024 → \$13.5B 2035, 7.49% CAGR). Note: Different research firms publish materially different TAM estimates; we use the more conservative figures.
- **Hertz acquires Gotham Dream Cars (Mar 2025):** Market Research Future Luxury Car Rental Market report; Hertz press release.

- **Enterprise Exotic Dubai launch (Q3 2024), Sixt premium subscription (Q4 2024), Hertz \$500M raise (Q1 2025):** Industry reporting summarized in Market Research Future Luxury Car Rental Market report.
- **Online booking share of luxury rentals (~78%):** Industry research consensus; varies 47–78% across sources depending on segment definition. We cite the more commonly-reported figure.

*End of investor pitch v1.0. This document should be read alongside **VELARE_EXOTICS_MASTER_PLAN.md** (product/operational spec). Update sources before any meeting more than 30 days from document date.*
